

CENTER for VEIN RESTORATION

Wednesday, May 25th, 11:30am to 12:30pm

**Venous insufficiency is a progressive disorder...
Early treatment is crucial to prevent further complications.**

Dr. Michael Cornwell, MD, FACS

Venous disease is the most common cause of leg ulceration. A 2018, peer-reviewed study in The New England Journal of Medicine, "A Randomized Trial of Early Endovenous Ablation in Venous Ulceration", concluded that early treatment of superficial venous reflux resulted in faster healing of, and more time free from, venous leg ulcers. Early signs include aching/pain, swollen ankles, heaviness, tiredness/fatigue, leg cramps, skin color changes, leg swelling, restless legs, dermatitis, itching/burning, throbbing & lymphedema.

Turkey Sandwich, Potato Salad, Cookie, Water & Iced Tea

Must sign up in advance at the front desk

Member \$1.00

Non-member \$3.00

Raffle Drawing (All \$ goes to Winner)

Seating is limited – Sign up early
